

COMPANY PROFILE

ROKOSAN

Better and healthier world

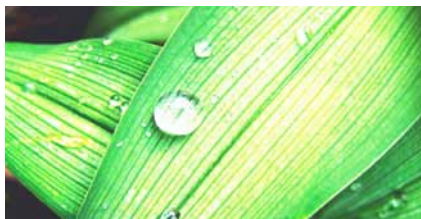

ROKOSAN'S PROFILE

WHO WE ARE | OUR ACTIVITIES

Company Rokosan has more than 20 years history and successes on the market. ROKOSAN has three main divisions focused on the production of organic and organic mineral fertilizers, rent of industrial areas and business offices and production of renewable energy from photovoltaic solar plants with total output 4,5 MW. Except of this, we plan to invest also in to biogas station projects in following years.

All of our activities and projects are in line with protection of environment and follow the rules of renewable and sustainable business. Moreover, in case of Fertilizer division, we have developed our own and unique technology, which has obtained patent in USA in August 2013, we successfully obtained patent in February 2015 in China and we also applied for single european patent. ROKOSAN has been awarded by several national and international institution

for technical innovation, or was selected as one of the top 30 high-tech technologies within EU in 2011. In 2013, the company ROKOSAN was the only company from V4 region selected by US embassies to participate on global investment summit in Washington DC. This approach of sustainable business in connection with highest standards and our unique technology helps us to make better and healthier world.

Production of organic-mineral fertilizer by processing of organic waste

- Capacity 10 000 t/year
- ASPEK, awarded by Ministry of environment, 3rd place
- Technology Rokosan selected as one of the top 30 high tech technology in EU in 2011, program Gateway
- Obtained **US patent** in Aug 2013 and **Chinese patent** in Feb 2015

FERTILIZER DIVISION

- We are a Slovak producer of **complex nutrition for various kinds and types of plants** with more than 20 years of tradition
- Our **products are certified** for use in **organic agricultural production** as **organic fertilizers**
- We sell and distribute plant nutrition for wholesales and retails in Europe, Africa, Asia
- Besides the domestic market we aim our activities at markets of neighbouring states delivering selected types of products and/or in cooperation with potential business partners we test the selected types of fertilizers in the form of field trials

WHAT WE DO

- We provide **comprehensive utilization of selected types of products of secondary animal production**, which we process into **organic and organo-mineral fertilizers**
- Materials that we use for **production of fertilizers** are **rich in natural nutrients**, therefore can be utilized for **growing vegetables and fruits, growing field (agricultural) crops, as well as they can be utilized in forestry**
- The basic products made of **organic materials** are further enriched by **minerals and trace elements** in the production process as required by separate fields in which these fertilizers are utilized
- We produce **liquid keratin** for **large and small producers of fertilizers**
- We perform **sanitation actions and treatment of forests and forest covers** for state and non-state sectors
- **The quality of our fertilizers** and the results of their utilization for growing individual farming products **are regularly tested and evaluated by the Central Agricultural Inspection and Testing Institute in Bratislava (ÚKSÚP) and the Plant Production Research Centre in Piešťany (CVRV)** in the form of small plot field trials
- Within **green and sustainability related initiatives of forestry we work together** with the **National Forest Centre in Zvolen (NLC), Technical University in Zvolen - Arboretum Borová Hora and growers of individual branches of the Forests of the Slovak Republic** on selected projects. One of our most important activities in the field of forestry include the **Revitalisation of Forests project**, where in cooperation with the **National Forest Centre in Zvolen (NLC)** we **fertilize coniferous plants with Rokohumin** fertilizer in the form of aerial spraying. Since 2004 we have **helped in the reproduction and revitalisation of forest covers of more than 20-thousand-hectare area** through this project

WE PROVIDE ASSISTANCE FOR

- agriculturalists
- foresters
- gardeners
- fruit growers
- winemakers
- farmers
- self-employed farmers
- small growers, cultivators
- florists
- owners of forest or fruit tree nurseries

WE PRODUCE

- liquid organo-mineral fertilizers with humic acids and amino acids
- liquid organo-mineral fertilizers
- bulk organic fertilizers from ground horn with humic acids
- bulk organic fertilizers from pure horn
- bulk organo-mineral fertilizers from horn

WE PRODUCE NUTRITION FOR THE FOLLOWING PLANTS

- crops
- vegetables
- fruits
- flowers
- trees
- grass
- ornamental plants
- coniferous plants

WE OFFER OUR PRODUCTION FOR

- primary agricultural producers
 - wholesalers of fertilizers and agricultural commodities
 - retailers and wholesalers of fertilizers in small packages
